GLOBAL SOFTWARE & AI PRODUCT ENGINEERING

Software, engineered for **advantage.**

Ascham is a product-led software company. We build AI-powered platforms — led by our flagship competitive-intelligence product, **Competitor IQ** — for teams that intend to win their markets, not just watch them.

01 — WHO WE ARE

A product company at heart. An engineering partner **by craft.**

Most software companies are founded first and go looking for a product afterwards. Ascham did it the other way around. Our founding team — senior engineers and product leaders from global technology companies — spent **two full years in R&D** building Competitor IQ before Ascham Inc. was formally incorporated in the United States in 2026, headquartered in New York.

That sequence shaped everything about us. Our engineering standards were forged **in production, with live enterprise pilots** — not in slide decks. When we incorporated, we already had a hardened platform, a proven delivery practice, and pilot customers who had renewed twice.

“We built the product first, and the company second. New clients get the maturity of the former and the hunger of the latter.”

KEVIN ZHANG · FOUNDER — ASCHAM INC.

2_{yrs}

of dedicated product R&D before our commercial launch

1M+

market signals processed every month by Competitor IQ

12+

enterprise pilot & client teams onboarded since 2024

90%

of our engineers are senior — small pods, no hand-offs

Product-first DNA

We hold client work to the same bar as our own product.

Senior-only craft

Every pod is led hands-on by principal-level engineers.

Security-minded

Enterprise controls by default, from day one of a build.

Outcome-driven

We commit to shipped, measured results — not billable hours.

CORPORATE FACT FILE

ORIGINS

Incorporated 2026 · in R&D since 2024

02 — OUR STORY

Two years of product, **then** a company.

Ascham's timeline is deliberately unusual: the product came first. By the time the company was incorporated in 2026, Competitor IQ had already survived two years of real-world use.

2024 Q1

The lab before the logo

A founding team of senior engineers begins Competitor IQ as a dedicated R&D program: competitive data is everywhere, usable intelligence is nowhere.

2025 Q2

Private beta, six industries

Battlecards and real-time alerting ship. The beta expands across six industries while the delivery practice matures around it.

2026 Q2

Ascham Inc. incorporates

The company forms in the United States around the proven product — federal EIN issued in June, operations standing up in New York.

2024 Q4

Signal Engine v1

The core AI engine processes its first million signals a month. Design partners in robotics and telecom join a private alpha.

2025 Q4

The thesis proves out

Pilot teams renew and expand seats. Two years of hardening leave a platform — and a practice — ready for market.

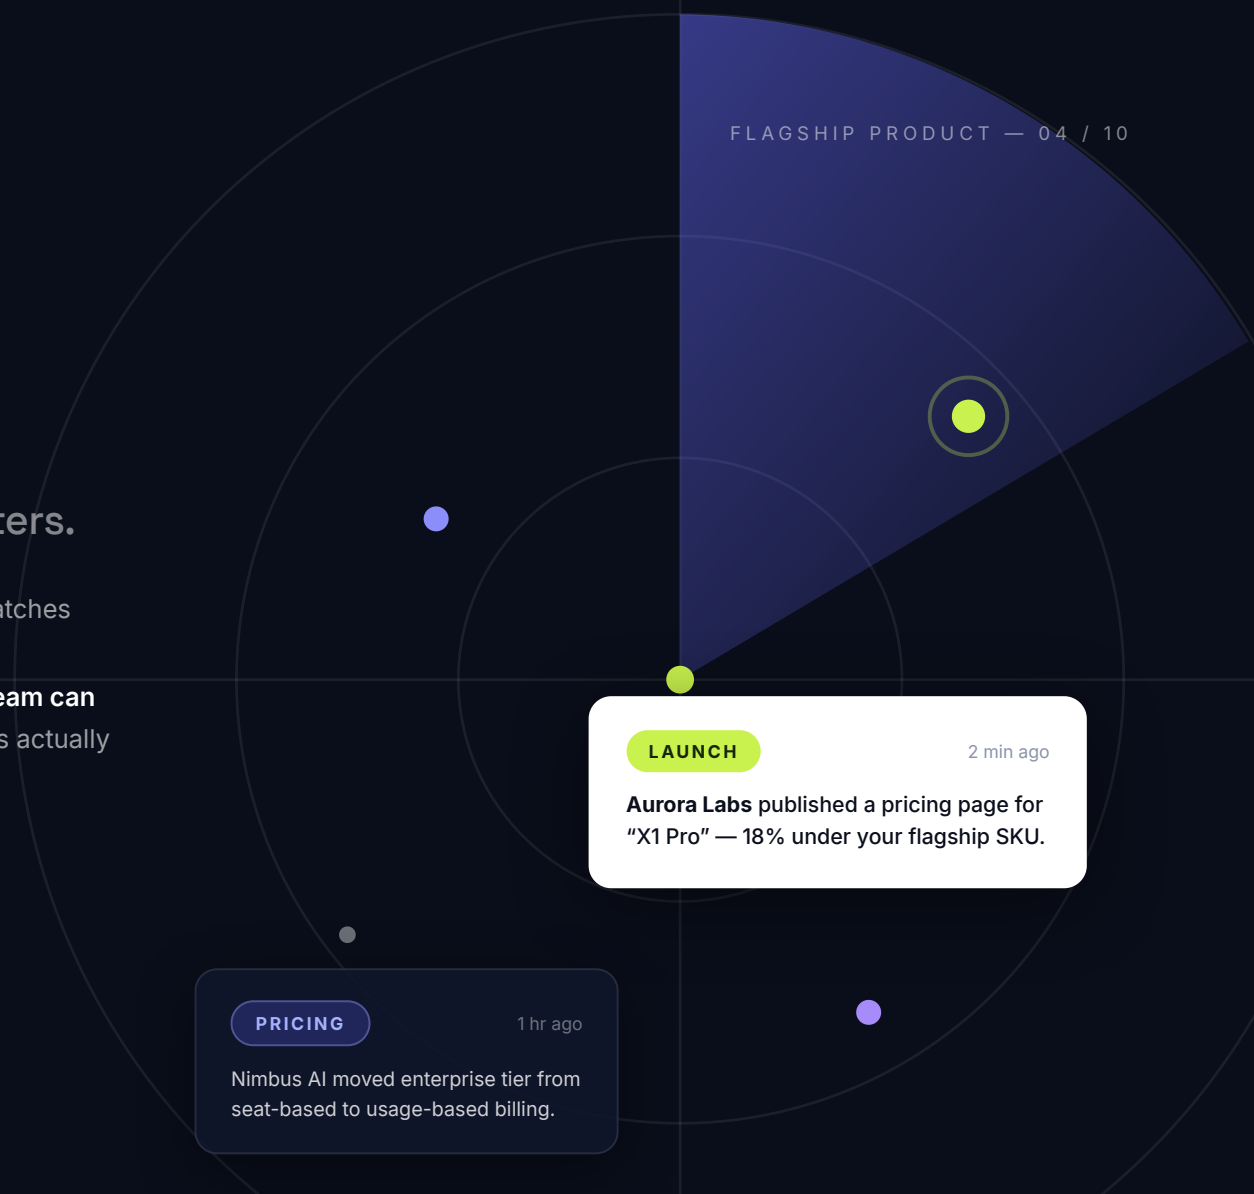

Now
Commercial launch

Competitor IQ is generally available; select engineering engagements open.

Competitor IQ

See every move in your market. Before it matters.

Competitor IQ is an **AI-powered competitive-intelligence platform**. It watches your competitors around the clock — pricing, launches, reviews, hiring, messaging — and turns a million scattered signals into **decisions your team can act on**: live battlecards, instant alerts, and a weekly brief your executives actually read.

30+

signal sources monitored continuously — from pricing pages to patent filings

15 min

from a raw market signal to an executive-ready, source-cited brief

-70%

time spent on manual competitor research, reported by pilot teams

03 — COMPETITOR IQ · HOW IT WORKS

From market noise to your next move.

One pipeline, three stages — engineered so that nothing important in your market happens without your team knowing, understanding, and acting on it.

01 — COLLECT

Watch everything

30+ **source types**, monitored continuously: competitor websites and pricing pages, app stores, review platforms, job boards, patents, press, social and regulatory filings.

02 — UNDERSTAND

Make it mean something

The **Signal Engine** dedupes, classifies and ranks over a million raw events a month, then writes source-cited summaries — so analysts verify in one click instead of hunting for hours.

03 — ACT

Move first

Always-fresh **battlecards** for sales, instant alerts in Slack and Teams, a weekly executive digest, and an open API that feeds your own workflows.

SIX WORKSPACES, ONE PLATFORM

Market Radar

A live map of every competitor move, ranked by relevance to you.

Battlecards

Auto-updated from live signals — never stale at the moment of a deal.

Price Tracker

SKU-level pricing history with alerts on every change and promo.

Launch Alerts

New products, features and campaigns surfaced in minutes, not weeks.

Review Intelligence

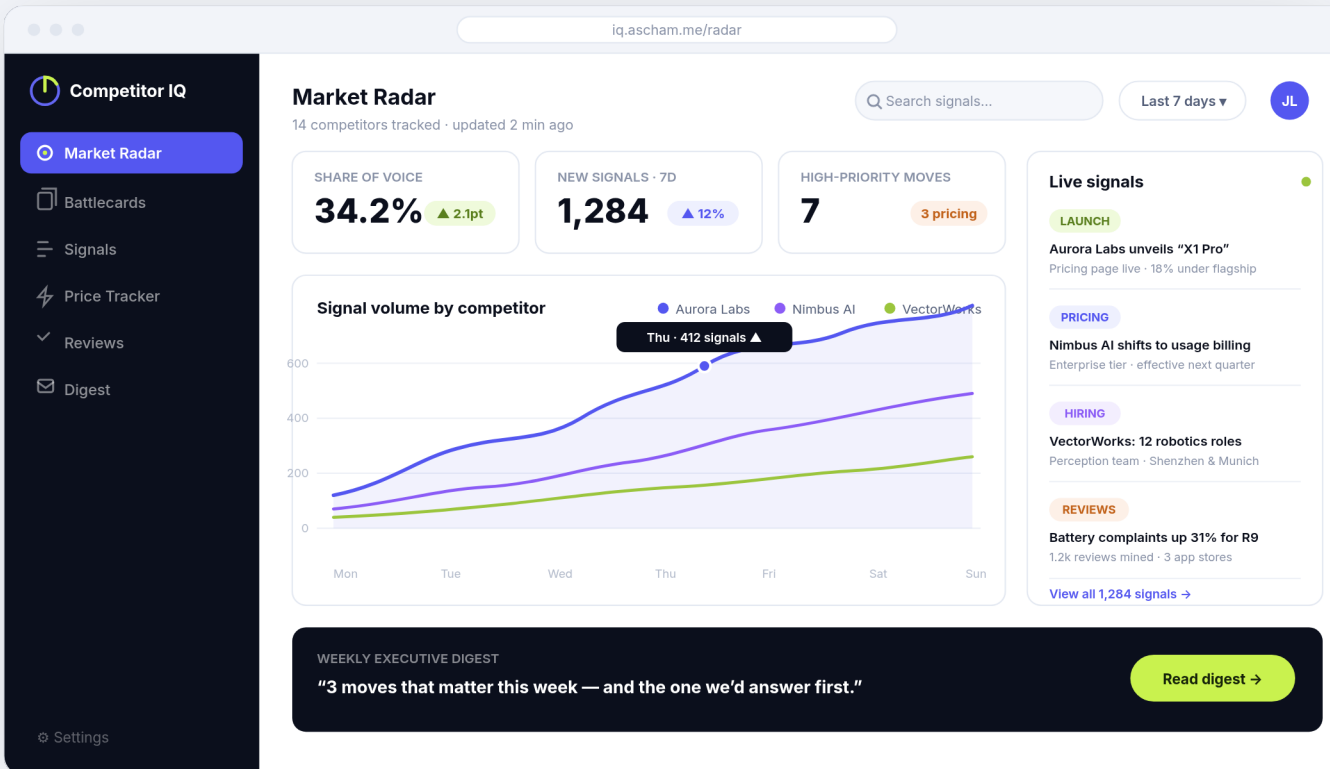

Mines competitor reviews for weaknesses your roadmap can exploit.

Executive Digest

A weekly, board-ready brief of what changed and why it matters.

Built for analysts. Loved by executives.

Enterprise-ready, day one

- SSO / SAML & SCIM**
Enterprise identity with automated provisioning.
- Role-based access & audit logs**
Least-privilege by default; every action traceable.
- Encryption & data residency**
Encrypted in transit and at rest; regional hosting options.
- Open API & webhooks**
Pipe intelligence into CRM, BI and internal tools.
- 99.9% uptime target**
Actively monitored, with a named success engineer.

See it on your market

Every demo runs on **your competitors, live** — not canned data. Two weeks from kickoff to your first executive digest.

Market Radar — one of six Competitor IQ workspaces. Interface shown with illustrative data.

05 — WHAT WE DO

The practice that **built** the product.

Competitor IQ wasn't built by a vendor — it was built by us: the same pods, standards and tooling we bring to client engagements. When you hire Ascham, you get **the engineering practice behind a live, enterprise-grade AI platform**.

We take on a deliberately small number of engagements at a time, so every client works directly with the people who ship.

How engagements start: a two-week discovery sprint with a working prototype at the end of it — so you judge us on software, not slideware.

Product Engineering

Full-cycle web, mobile and platform builds — from first commit to scale — with product thinking baked into every sprint.

07 — HOW WE WORK

Trust is an engineering deliverable.

Delivery you can see

- **Small senior pods** — 3–5 engineers, led hands-on, no hand-offs between “sales team” and “delivery team”.
- **A demo every week** — working software from week one; roadmap, burn-down and risks visible in a shared dashboard.
- **Your codebase, your cloud** — everything in your repos and your accounts from the first commit.

Security by default

- **Aligned with ISO 27001 & SOC 2 practices** — access reviews, least privilege, secrets management, audit trails.
- **Encryption everywhere** — in transit and at rest, for our product and for every client system we touch.
- **Clean IP, clean exits** — clear IP assignment, documented handover, no lock-in by design.

Quality you can audit

- **100% peer-reviewed code** — nothing merges without a second senior engineer’s approval.
- **Tested and observable** — automated test suites, CI/CD pipelines and production observability on every build.
- **Documentation as a habit** — architecture decisions recorded as we go, not reconstructed at the end.

01

Discover

Two weeks. Your problem, mapped — closing with a working prototype, not a deck.

02

Pilot

Four to six weeks. A production-grade slice, live with real users and real data.

03

Scale

A steady senior pod, shipping on a cadence you can plan a business around.

— NEXT STEP

Let's build **your** advantage.

Book a Competitor IQ demo and we'll run it live on your market — your competitors, your categories, your first executive digest within two weeks. Or talk to us about an engineering engagement with the team that built it.
